INSTALLATION

1. Via Terminal

- Open directory with downloaded DEBIAN file
- Open Terminal and use `*sudo apt install ./calculario_2.0_amd64.deb* ` command
- Then click install and after short time is your *Calculario* ready

2. Via Doubleclick

- Open directory with downloaded DEBIAN file
- Double-click *"calculario_2.0_amd64.deb"* and click install
- After short time is your *Calculario* ready

UNINSTALLATION

1. Via Terminal

- Open Terminal and use `*sudo apt remove calculario*` command
    - NOTE: You have to use *"calculario"* with lowercase *"c"*
- *Calculario* is uninstalled

2. Via "Uninstaller"

- Because *calculario_2.0_amd64.deb* is simultaneously uninstaller, just double-click it and press uninstall button
- *Calculario* is uninstalled

HOW TO USE *CALCULARIO*

- Open *Calculario* in Apps menu or via Terminal by typing "*Calculario"* to command line
- In the top right corner is *"?" button*, which provides help
- In the top middle section is Input/Output window, where mathematical expression is shown
- On the right and left side of that are *"<"* and *">"* buttons, which allow you to move through your expression

- Under I/O window is section with more complex functions:
  - ^ - power
  - n√ - n^{th} root
  - log - logarithm
  - ! – factorial
- Under that are constants
  - π - pi
  - e - Euler constant
- Num pad is located in the left bottom corner
- Input from keyboard is possible
  - NOTE: Operators and characters must be separated by *SPACE*
- In the right bottom corner are simple operations:
  - Add
  - Substract
  - Multiply
  - Divide
- To operate the calculator:
  - with "n^{th} root" you have to:
    - click on numeric button to set *degree* of the root
    - click on "n^{th} root" button
    - click on numeric button or constant button to set *base*
  - with "^" you are raising *base* to power of *degree*
  - with "log" you have to:
    - click on numeric button to set *base* (implicitly set to 10)
    - click on "log" button
    - click on numeric button to set *anti-logarithm*
    - NOTE: Anti-logarithm is from interval <1,∞>
    - NOTE: Result of logarithm is inaccurate
  - with "!" you are counting factorial of *base*
  - "+" – add
  - "-" – substract
  - "/" – divide
  - "*" – multiply
  - "=" to see the result
  - with "AC" button you are clearing everything
  - with "DEL" button you are deleting character/operator on the left
